Class 9: Maths Chapter 20 solutions. Complete Class 9 Maths Chapter 20 Notes.

Selina Class 9 ICSE Solutions Mathematics : Chapter 20 - Area and Perimeter of Plane Figures

Selina 9th Maths Chapter 20, Class 9 Maths Chapter 20 solutions

Exercise 20(A)

Solution 1:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Since the sides of the triangle are 18cm, 24cm and 30cm respectively.

$$\begin{aligned} s &= \frac{18 + 24 + 30}{2} \\ &= 36 \end{aligned}$$

Hence area of the triangle is

$$\begin{aligned} A &= \sqrt{s(s-a)(s-b)(s-c)} \\ &= \sqrt{36(36-18)(36-24)(36-30)} \\ &= \sqrt{36 \times 18 \times 12 \times 6} \\ &= \sqrt{46656} \\ &= 216 \text{sqcm} \end{aligned}$$

Again

$$A = \frac{1}{2} \text{base} \times \text{altitude}$$

Hence

$$\begin{aligned} 216 &= \frac{1}{2} \times 30 \times h \\ h &= 14.4 \text{cm} \end{aligned}$$

Solution 2:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Let the sides of the triangle are

$$a=3x$$

$$b=4x$$

$$c=5x$$

Given that the perimeter is 144 cm.

hence

$$3x + 4x + 5x = 144$$

$$\Rightarrow 12x = 144$$

$$\Rightarrow x = \frac{144}{12}$$

$$\Rightarrow x = 12$$

$$s = \frac{a + b + c}{2} = \frac{12x}{2} = 6x = 72$$

The sides are $a=36$ cm, $b=48$ cm and $c=60$ cm

Area of the triangle is

$$\begin{aligned} A &= \sqrt{s(s-a)(s-b)(s-c)} \\ &= \sqrt{72(72-36)(72-48)(72-60)} \\ &= \sqrt{72 \times 36 \times 24 \times 12} \\ &= \sqrt{746496} \\ &= 864 \text{ cm}^2 \end{aligned}$$

Solution 3:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

(i)

Area of the triangle is given by

$$A = \frac{1}{2} \times AB \times AC$$

$$= \frac{1}{2} \times 4 \times 4$$

$$= 8 \text{ sq.cm}$$

(ii)

Again area of the triangle

$$A = \frac{1}{2} \times BC \times h$$

$$8 = \frac{1}{2} \times \left(\sqrt{4^2 + 4^2} \right) \times h$$

$$h = 2.83 \text{ cm}$$

Solution 4:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Area of an equilateral triangle is given by

$$\frac{\sqrt{3}}{4} \times (\text{side})^2 = A$$

$$\frac{\sqrt{3}}{4} \times (\text{side})^2 = 36\sqrt{3}$$

$$(\text{side})^2 = 144$$

$$\text{side} = 12 \text{ cm}$$

Hence

$$\text{perimeter} = 3 \times (\text{its side})$$

$$= 3 \times 12$$

$$= 36 \text{ cm}$$

Solution 5:

Since the perimeter of the isosceles triangle is 36cm and base is 16cm.

hence the length of each of equal sides are $\frac{36 - 16}{2} = 10 \text{ cm}$

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Here

It is given that

$$a = \text{equal sides} = 10\text{cm}$$

$$b = \text{base} = 16\text{cm}$$

Let 'h' be the altitude of the isosceles triangle.

Since the altitude from the vertex bisects the base perpendicularly, we can apply Pythagoras Theorem.

Thus we have,

$$h = \sqrt{a^2 - \left(\frac{b}{2}\right)^2} = \frac{1}{2}\sqrt{4a^2 - b^2}$$

We know that

$$\text{Area of the triangle} = \frac{1}{2} \times \text{base} \times \text{altitude}$$

$$\begin{aligned}\text{Area of the triangle} &= \frac{1}{2} \times b \times \sqrt{4a^2 - b^2} \\ &= \frac{1}{2} \times 16 \times \sqrt{400 - 256} \\ &= 48\text{sq.cm}\end{aligned}$$

Solution 6:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

It is given that

$$\text{Area} = 192 \text{ sq.cm}$$

$$\text{base} = 24 \text{ cm}$$

Knowing the length of equal side, a , and base, b , of an isosceles triangle, the area can be calculated using the formula,

$$A = \frac{1}{4} \times b \times \sqrt{4a^2 - b^2}$$

Let ' a ' be the length of an equal side.

$$\text{Area} = \frac{1}{4} \times b \times \sqrt{4a^2 - b^2}$$

$$192 = \frac{1}{4} \times 24 \times \sqrt{4a^2 - 576}$$

$$192 = 6\sqrt{4a^2 - 576}$$

$$\sqrt{4a^2 - 576} = 32$$

$$4a^2 - 576 = 1024$$

$$4a^2 = 1600$$

$$a = 20 \text{ cm}$$

$$\text{Hence perimeter} = 20 + 20 + 24 = 64 \text{ cm}$$

Solution 7:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

From $\triangle ABC$,

$$\begin{aligned}AB &= \sqrt{AC^2 - BC^2} \\&= \sqrt{16^2 - 8^2} \\&= \sqrt{192}\end{aligned}$$

Area of $\triangle ABC$

$$\begin{aligned}\triangle ABC &= \frac{1}{2} \times 8 \times \sqrt{192} \\&= 4\sqrt{192}\end{aligned}$$

Area of $\triangle BCD$

$$\begin{aligned}\triangle BCD &= \frac{\sqrt{3}}{4} \times 8^2 \\&= 16\sqrt{3}\end{aligned}$$

Now

$$\begin{aligned}\triangle ABD &= \triangle ABC - \triangle BDC \\&= 4\sqrt{192} - 16\sqrt{3} \\&= 32\sqrt{3} - 16\sqrt{3} \\&= 16\sqrt{3} \text{ sq. cm}\end{aligned}$$

Solution 8:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Given, $AB = 8$ cm, $AD = 10$ cm, $BD = 12$ cm, $DC = 13$ cm and $\angle DBC = 90^\circ$

$$\begin{aligned}BC &= \sqrt{DC^2 - BD^2} \\&= \sqrt{13^2 - 12^2} \\&= 5\text{ cm}\end{aligned}$$

Hence perimeter = $8 + 10 + 13 + 5 = 36$ cm

Area of $\triangle ABD$

$$\begin{aligned}\triangle ABD &= \sqrt{15(15-8)(15-10)(15-12)} \\&= \sqrt{15 \times 7 \times 5 \times 3} \\&= 15\sqrt{7} \\&= 39.7\end{aligned}$$

Area of $\triangle DBC$

$$\begin{aligned}\triangle BDC &= \frac{1}{2} \times 12 \times 5 \\&= 30\end{aligned}$$

Now

$$\begin{aligned}\text{Area of } ABCD &= \text{area of } \triangle ABD + \text{area of } \triangle BDC \\&= 39.7 + 30 \\&= 69.7 \text{ sq. cm}\end{aligned}$$

Solution 9:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

$$\text{Area of the rectangular field} = \frac{49572}{36.72} = 135000$$

Let the height of the triangle be x

$$135000 = \frac{1}{2} \times x \times 3x$$

$$\Rightarrow x^2 = 90000$$

$$\Rightarrow x = 300$$

Height = 300 m

Base = 900 m

Solution 10:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

(i)

Given that the sides of a triangle are in the ratio 5:3:4.

Also, given that the perimeter of the triangle is 180.

Thus, we have, $5x + 4x + 3x = 180$

$$\Rightarrow 12x = 180$$

$$\Rightarrow x = \frac{180}{12}$$

$$\Rightarrow x = 15$$

Thus, the sides are 5×15 , 3×15 and 4×15 .

That is the sides are 75 m, 45 m and 60 m.

Since the sides are in the ratio, 5:3:4, it is a Pythagorean triplet.

Therefore, the triangle is a right angled triangle.

Area of a right angled triangle = $\frac{1}{2} \times \text{base} \times \text{altitude}$

$$\Rightarrow = \frac{1}{2} \times 45 \times 60$$

$$\Rightarrow = 45 \times 30 = 1350 \text{ m}^2$$

(ii)

Consider the following figure.

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

In the above figure,

The largest side is $AC = 75$ m.

The altitude corresponding to AC is BD .

We need to find the value of BD .

Now consider the triangles $\triangle BCD$ and $\triangle BAD$.

We have,

$$\angle B = \angle B \quad [\text{common}]$$

$$BD = BD \quad [\text{common}]$$

$$\angle D = \angle D = 90^\circ$$

Thus, by Angle-Side-Angle criterion of congruence, we have $\triangle BCD \cong \triangle ABD$.

Similar triangles have similar proportionality.

Thus, we have,

$$\frac{CD}{BD} = \frac{BD}{AD}$$

$$\Rightarrow BD^2 = AD \times CD \dots (1)$$

From subpart(i), the sides of the triangle are

$AC = 75$ m, $AB = 60$ m and $BC = 45$ m

Let $AD = x$ m $\Rightarrow CD = (75 - x)$ m

Thus applying Pythagoras Theorem,
from right triangle $\triangle BCD$, we have

$$45^2 = (75 - x)^2 + BD^2$$

$$\Rightarrow BD^2 = 45^2 - (75 - x)^2$$

$$\Rightarrow BD^2 = 2025 - (5625 + x^2 - 150x)$$

$$\Rightarrow BD^2 = 2025 - 5625 - x^2 + 150x$$

$$\Rightarrow BD^2 = -3600 - x^2 + 150x \dots (2)$$

Now applying Pythagoras Theorem,
from right triangle $\triangle ABD$, we have

$$60^2 = x^2 + BD^2$$

$$\Rightarrow BD^2 = 60^2 - x^2$$

$$\Rightarrow BD^2 = 3600 - x^2 \dots (3)$$

From equations (2) and (3), we have,

$$-3600 - x^2 + 150x = 3600 - x^2$$

$$\Rightarrow 150x = 3600 + 3600$$

$$\Rightarrow 150x = 7200$$

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

$$\Rightarrow x = \frac{7200}{150}$$

$$\Rightarrow x = 48$$

Thus, $AD = 48$ and $CD = 75 - 48 = 27$

Substituting the values $AD = 48$ m

and $CD = 27$ m in equation (1), we have

$$BD^2 = 48 \times 27$$

$$\Rightarrow BD^2 = 1296$$

$$\Rightarrow BD = 36 \text{ m}$$

The altitude of the triangle corresponding to its largest side is $BD = 36$ m

(iii)

The area of the triangular field

from subpart(i) is 1350 m^2

The cost of levelling the field is

Rs.10 per square metre.

Thus, the total cost of

levelling the field $= 1350 \times 10 = \text{Rs.}13,500$

Solution 11:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Let the height of the triangle be x cm.

Equal sides are $(x+4)$ cm.

According to Pythagoras theorem,

$$(x+4)^2 = x^2 + 12^2$$

$$8x = 128$$

$$x = 16\text{cm}$$

Hence perimeter = $20 + 20 + 24 = 64\text{cm}$

Area of the isosceles triangle is given by

Here $a=20\text{cm}$

$b=24\text{cm}$

hence

$$\text{Area} = \frac{1}{4} \times b \times \sqrt{4a^2 - b^2}$$

$$= \frac{1}{4} \times 24 \times \sqrt{1024}$$

$$= 192\text{sq.cm}$$

Solution 12:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Each side of the triangle is $\frac{60}{3} = 20cm$

Hence the area of the equilateral triangle is given by

$$\begin{aligned}A &= \frac{\sqrt{3}}{4} \times 20^2 \\&= 100\sqrt{3} \\&= 173.2sq.cm\end{aligned}$$

The height h of the triangle is given by

$$\begin{aligned}\frac{1}{2} \times 20 \times h &= 173.2 \\h &= 17.32cm\end{aligned}$$

Solution 13:

The area of the triangle is given as 150sq.cm

$$\begin{aligned}\frac{1}{2} \times x \times (x + 5) &= 150 \\x^2 + 5x - 300 &= 0 \\(x + 20)(x - 15) &= 0 \\x &= 15\end{aligned}$$

Hence $AB=15cm, AC=20cm$ and

$$\begin{aligned}BC &= \sqrt{15^2 + 20^2} \\&= 25cm\end{aligned}$$

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Solution 14:

Let the two sides be x cm and $(x-3)$ cm.

Now

$$\frac{1}{2} \times x \times (x-3) = 54$$

$$x^2 - 3x - 108 = 0$$

$$(x-12)(x+9) = 0$$

$$x = 12\text{cm}$$

Hence the sides are 12cm, 9cm and $\sqrt{12^2 + 9^2} = 15\text{cm}$

The required perimeter is $12+9+15=36\text{cm}$.

Solution 15:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

$$\begin{aligned}\text{Area of } \triangle ABC &= \frac{1}{4} \times 36 \times \sqrt{4 \times 30^2 - 36^2} \\&= \frac{1}{4} \times 36 \times \sqrt{2304} \\&= \frac{1}{4} \times 36 \times 48 \\&= 432\end{aligned}$$

Since $AB=AC$ and $\angle BOC = 90^\circ$

$$\angle BOD = \angle COD = 45^\circ$$

hence $\angle OBD = 45^\circ$ and $OD = BD = 18\text{cm}$

Now

$$\begin{aligned}\text{Area of } \triangle BOC &= \frac{1}{2} \times 36 \times 18 \\&= 324\end{aligned}$$

$$\begin{aligned}\text{Area of } ABOC &= \text{Area of } \triangle ABC - \text{Area of } \triangle BOC \\&= 432 - 324 \\&= 108\text{sq.cm}\end{aligned}$$

Exercise 20(B)

Solution 1:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Area = $\frac{1}{2} \times \text{one diagonal} \times \text{sum of the lengths of the}$
perpendiculars drawn from it on the remaining
two vertices.

$$= \frac{1}{2} \times 30 \times (11 + 19)$$
$$= 450 \text{sq.cm}$$

Solution 2:

$$\text{Area of the quadrilateral} = \frac{1}{2} \times \text{the product of the diagonals.}$$
$$= \frac{1}{2} \times 16 \times 13$$
$$= 104 \text{cm}^2$$

Solution 3:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Consider the figure:

From the right triangle ABD we have

$$\begin{aligned} AB &= \sqrt{26^2 - 24^2} \\ &= 2\sqrt{13^2 - 12^2} \\ &= 2(5) \\ &= 10 \end{aligned}$$

The area of right triangle ABD will be:

$$\begin{aligned} \Delta ABD &= \frac{1}{2}(AB)(BD) \\ &= \frac{1}{2}(10)(24) \\ &= 120 \end{aligned}$$

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Again from the equilateral triangle BCD we have $CP \perp BD$

$$\begin{aligned}PC &= \sqrt{24^2 - 12^2} \\&= 12\sqrt{2^2 - 1^2} \\&= 12\sqrt{3}\end{aligned}$$

Therefore the area of the triangle BCD will be:

$$\begin{aligned}\Delta BCD &= \frac{1}{2}(BD)(PC) \\&= \frac{1}{2}(24)(12\sqrt{3}) \\&= 144\sqrt{3}\end{aligned}$$

Hence the area of the quadrilateral will be:

$$\begin{aligned}\Delta ABD + \Delta BCD &= 120 + 144\sqrt{3} \\&= 369.41 \text{ cm}^2\end{aligned}$$

Solution 4:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

The figure can be drawn as follows:

Here ABD is a right triangle. So the area will be:

$$\begin{aligned}\Delta ABD &= \frac{1}{2}(24)(32) \\ &= 384\end{aligned}$$

Again

$$\begin{aligned}BD &= \sqrt{24^2 + 32^2} \\ &= 8\sqrt{3^2 + 4^2} \\ &= 8(5) \\ &= 40\end{aligned}$$

Now BCD is an isosceles triangle and BP is perpendicular to BD , therefore

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

$$\begin{aligned} DP &= \frac{1}{2} BD \\ &= \frac{1}{2} (40) \\ &= 20 \end{aligned}$$

From the right triangle DPC we have

$$\begin{aligned} PC &= \sqrt{52^2 - 20^2} \\ &= 4\sqrt{13^2 - 5^2} \\ &= 4(12) \\ &= 48 \end{aligned}$$

So

$$\begin{aligned} \Delta DPC &= \frac{1}{2} (40)(48) \\ &= 960 \end{aligned}$$

Hence the area of the quadrilateral will be:

$$\begin{aligned} \Delta ABD + \Delta DPC &= 960 + 384 \\ &= 1344 \text{ cm}^2 \end{aligned}$$

Solution 5:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Let the width be x and length $2x$ km.

Hence

$$2(x + 2x) = \frac{3}{5}$$

$$x = \frac{1}{10} \text{ km}$$

$$= 100 \text{ m}$$

Hence the width is 100m and length is 200m

The required area is given by

$$A = \text{length} \times \text{width}$$

$$= 100 \times 200$$

$$= 20,000 \text{ sq.m}$$

Solution 6:

Length of the laid with grass $= 85 - 5 - 5 = 75 \text{ m}$

Width of the laid with grass $= 60 - 5 - 5 = 50 \text{ m}$

Hence area of the laid with grass is given by

$$A = 75 \times 50$$

$$= 3750 \text{ sq.m}$$

Solution 7:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Area of the rectangle is given by

$$\begin{aligned}A &= l \times b \\&= 6 \times 4 \\&= 24 \text{sq. cm}\end{aligned}$$

Let h be the height of the triangle, then

$$\begin{aligned}\frac{1}{2} \times \text{base} \times h &= 3A \\\frac{1}{2} \times 6 \times h &= 3 \times 24 \\h &= 24 \text{cm}\end{aligned}$$

Solution 8:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Consider the following figure.

Thus the required area = area shaded in blue + area shaded in red

$$= \text{Area ABPQ} + \text{Area TUDC} + \text{Area A'PUD'} + \text{Area QB'C'T}$$

$$= 2\text{Area ABPQ} + 2\text{Area QB'C'T}$$

$$= 2(\text{Area ABPQ} + \text{Area QB'C'T})$$

Area of the footpath is given by

$$A = 2 \times (25 + 25 + 17 + 17)$$

$$= 168 \text{ sq. m}$$

$$= 1680000 \text{ sq.cm}$$

$$\text{Hence number of tiles required} = \frac{1680000}{400} = 4200$$

Solution 9:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Perimeter of the garden

$$\begin{aligned}s &= \frac{300}{0.75} \\ &= 400\text{sq.m}\end{aligned}$$

Again, length of the garden is given to be 120 m. hence breadth of the garden b is given by

$$\begin{aligned}2(l + b) &= S \\ 2(120 + b) &= 400 \\ b &= 80\text{m}\end{aligned}$$

Hence area of the field

$$\begin{aligned}A &= 120 \times 80 \\ &= 9600\text{sq.m}\end{aligned}$$

Solution 10:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Length of the rectangle = x

Width of the rectangle = $\frac{4}{7}x$

Hence its perimeter is given by

$$2\left(x + \frac{4}{7}x\right) = y$$

$$2\left(\frac{11x}{7}\right) = y$$

$$\frac{22x}{7} = y$$

Again it is given that the perimeter is 4400 cm.

Hence

$$\frac{22x}{7} = 4400$$

$$x = 1400$$

Length of the rectangle = 1400 cm = 14 m

Solution 11:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

(i)

Breadth of the verandah = x

Length of the verandah = $x + 3$

According to the question

$$2(x + (x + 3)) = x(x + 3)$$

$$4x + 6 = x^2 + 3x$$

$$x^2 - x - 6 = 0$$

(ii)

From the above equation

$$x^2 - x - 6 = 0$$

$$(x - 3)(x + 2) = 0$$

$$x = 3$$

Hence breadth = 3m

Length = $3 + 3 = 6$ m

Solution 12:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Consider the following figure.

Thus, the area of the shaded portion

$$= \text{Area}(ABCD) + \text{Area}(EFGH) - \text{Area}(IJKL) \dots (1)$$

Dimensions of ABCD: $45 \text{ m} \times 15 \text{ m}$

Thus, the area of ABCD = $45 \times 15 = 675 \text{ m}^2$

Dimensions of EFGH: $80 \text{ m} \times 8 \text{ m}$

Thus, the area of EFGH = $80 \times 8 = 640 \text{ m}^2$

Dimensions of IJKL: $15 \text{ m} \times 8 \text{ m}$

Thus, the area of IJKL = $15 \times 8 = 120 \text{ m}^2$

Therefore, from equation (1),

the area of the shaded

portion = $675 + 640 - 120 = 1195 \text{ m}^2$

Solution 13:

First we have to calculate the area of the hall.

$$\text{Area} = 45 \times 32$$

$$= 1440 \text{ m}^2$$

$$\text{Cost} = \frac{40}{1.20} \times 1440$$

$$= 48,000$$

We need to find the cost of carpeting of $80 \text{ cm} = 0.8 \text{ m}$ wide carpet, if the rate of carpeting is Rs. 25. Per metre.

Then

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

$$\begin{aligned} \text{Cost} &= \frac{25}{0.8} \times 1440 \\ &= \text{Rs.} 45,000 \end{aligned}$$

Solution 14:

Let a be the length of each side of the square.

Hence

$$2a^2 = (\text{diagonal})^2$$

$$a^2 = \frac{15^2}{2}$$

$$a^2 = 112.5$$

$$a = 10.60$$

Hence

$$\begin{aligned} \text{Area} &= a^2 \\ &= 112.5 \text{sq.m} \end{aligned}$$

And

$$\text{Perimeter} = 4a = 42.43m$$

Solution 15:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Consider the following figure.

(i)

The length of the lawn = $30 - 2 - 2 = 26$ m

The breadth of the lawn = $12 - 2 = 10$ m

(ii)

The orange shaded area in the figure is the required area.

Area of the flower bed is calculated as follows:

$$\begin{aligned} A &= 10 \times 2 + 10 \times 2 + 30 \times 2 \\ &= 20 + 20 + 60 \\ &= 100 \text{sq.m} \end{aligned}$$

Solution 16:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

$$\begin{aligned}\text{Area of the floor} &= 15 \times 8 \\ &= 120 \text{sq.m}\end{aligned}$$

$$\begin{aligned}\text{Area of one tiles} &= 0.50 \times 0.25 \\ &= 0.125 \text{sq.m}\end{aligned}$$

Number of tiles required

$$\begin{aligned}n &= \frac{\text{Area of floor}}{\text{Area of tiles}} \\ &= \frac{120}{0.125} \\ &= 960\end{aligned}$$

$$\begin{aligned}\text{Area of carpet uncovered} &= 2(1 \times 15 + 1 \times 6) \\ &= 42 \text{sq.m}\end{aligned}$$

$$\text{Fraction of floor uncovered} = \frac{42}{120} = \frac{7}{20}$$

Solution 17:

Since

$$\text{Area} = \text{Base} \times \text{Height}$$

$$\therefore 24 \times 12 = 18 \times h$$

$$\begin{aligned}h &= \frac{24 \times 12}{18} \\ &= 16 \text{m}\end{aligned}$$

Hence the distance between the shorter sides is 16m.

Solution 18:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

At first we have to calculate the area of the triangle having sides 10cm, 12cm and 16cm. let the area be S.

Now

$$S = \frac{10 + 12 + 16}{2}$$

$$= 19\text{cm}$$

$$A = \sqrt{19 \times (19 - 10) \times (19 - 12) \times (19 - 16)}$$

$$= \sqrt{19 \times 9 \times 7 \times 3}$$

$$= 59.9\text{sq.cm}$$

$$\text{Area of parallelogram} = 2A$$

$$= 2 \times 59.9$$

$$= 119.8\text{sq.cm}$$

Again

Area = base $\times$ height

Here base = 10cm

Hence

$$\text{height} = \frac{\text{Area}}{\text{base}}$$

$$= \frac{119.8}{10}$$

$$= 11.98\text{cm}$$

Solution 19:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

(i)

We know that

$$\text{Area of Rhombus} = \frac{1}{2} \times AC \times BD$$

Here $A = 216 \text{ sq.cm}$

$AC = 24 \text{ cm}$

$BD = ?$

Now

$$A = \frac{1}{2} \times AC \times BD$$

$$216 = \frac{1}{2} \times 24 \times BD$$

$$BD = 18 \text{ cm}$$

(ii)

Let a be the length of each side of the rhombus.

$$a^2 = \left(\frac{AC}{2}\right)^2 + \left(\frac{BD}{2}\right)^2$$

$$a^2 = 12^2 + 9^2$$

$$a^2 = 225$$

$$a = 15 \text{ cm}$$

(iii)

Perimeter of the rhombus $= 4a = 60 \text{ cm}$.

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Solution 20:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Let a be the length of each side of the rhombus.

$$4a = \text{perimeter}$$

$$4a = 52$$

$$a = 13\text{cm}$$

(i)

It is given that,

$$AC = 24\text{cm}$$

We have to find BD .

Now

$$a^2 = \left(\frac{AC}{2}\right)^2 + \left(\frac{BD}{2}\right)^2$$

$$13^2 = 12^2 + \left(\frac{BD}{2}\right)^2$$

$$\left(\frac{BD}{2}\right)^2 = 5^2$$

$$BD = 10\text{cm}$$

Hence the other diagonal is 10cm.

(ii)

$$\text{Area of the rhombus} = \frac{1}{2} \times AC \times BD$$

$$= \frac{1}{2} \times 24 \times 10$$

$$= 120\text{sq.cm}$$

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Solution 21:

Let a be the length of each side of the rhombus.

$$4a = \text{perimeter}$$

$$4a = 46$$

$$a = 11.5\text{cm}$$

We know that,

$$\text{Area} = \text{Base} \times \text{Height}$$

$$= 11.5 \times 8$$

$$= 92\text{sq.cm}$$

Solution 22:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

The diagram is redrawn as follows:

Here

$$AF=1.2\text{m}, EF=0.3\text{m}, DC=0.6\text{m}, BK=1.8-0.6-0.3=0.9\text{m}$$

Hence

$$\begin{aligned} \text{Area of } ABCDEF &= \text{Area of } AHEF + \text{Area of } HKCD \\ &\quad + \Delta KBC \\ &= 1.2 \times 0.3 + 2 \times 0.6 + \frac{1}{2} \times 2 \times 0.9 \\ &= 2.46\text{sq.m} \end{aligned}$$

Solution 23:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Here we found two geometrical figure, one is a triangle and other is the trapezium.

Now

$$\begin{aligned}\text{Area of the triangle} &= \frac{1}{2} \times 12 \times 25 \\ &= 150\text{sq.m}\end{aligned}$$

$$\begin{aligned}\text{Area of the trapezium} &= \frac{1}{2} \times (25 + 15) \times \left(\sqrt{26^2 - (25 - 15)^2} \right) \\ &= 20 \times 24 \\ &= 480\text{sq.m}\end{aligned}$$

hence area of the whole figure = $150 + 480 = 630\text{sq.m}$

Solution 24:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

We can divide the field into three triangles and one trapezium.

Let A,B,C be the three triangular region and D be the trapezoidal region.

Now

$$\begin{aligned}\text{Area of } A &= \frac{1}{2} \times AD \times GE \\ &= \frac{1}{2} \times (50 + 40 + 15 + 25) \times 60 \\ &= 3900 \text{sq.m}\end{aligned}$$

$$\begin{aligned}\text{Area of } B &= \frac{1}{2} \times AF \times BF \\ &= \frac{1}{2} \times 50 \times 50 \\ &= 1250 \text{sq.m}\end{aligned}$$

$$\begin{aligned}\text{Area of } C &= \frac{1}{2} \times HD \times CH \\ &= \frac{1}{2} \times 25 \times 25 \\ &= 312.5 \text{sq.m}\end{aligned}$$

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

$$\begin{aligned}\text{Area of } D &= \frac{1}{2} \times (BF + CH) \times (FG + GH) \\ &= \frac{1}{2} \times (50 + 25) \times (40 + 15) \\ &= \frac{1}{2} \times 75 \times 55 \\ &= 2062.5 \text{sq.m}\end{aligned}$$

$$\begin{aligned}\text{Area of the figure} &= \text{Area of A} + \text{Area of B} + \text{Area of C} + \text{Area of D} \\ &= 3900 + 1250 + 312.5 + 2062.5 \\ &= 7525 \text{sq.m}\end{aligned}$$

Solution 25:

Let x be the width of the footpath.

Then

$$\begin{aligned}\text{Area of footpath} &= 2 \times (30 + 24)x + 4x^2 \\ &= 4x^2 + 108x\end{aligned}$$

Again it is given that area of the footpath is 360sq.m.

Hence

$$\begin{aligned}4x^2 + 108x &= 360 \\ x^2 + 27x - 90 &= 0 \\ (x - 3)(x + 30) &= 0 \\ x &= 3\end{aligned}$$

Hence width of the footpath is 3m.

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Solution 26:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Area of the square is 484.

Let a be the length of each side of the square.

Now

$$a^2 = 484$$

$$a = 22\text{m}$$

Hence length of the wire is $= 4 \times 22 = 88\text{m}$.

(i)

Now this 88m wire is bent in the form of an equilateral triangle.

$$\begin{aligned}\text{Side of the triangle} &= \frac{88}{3} \\ &= 29.3\text{m}\end{aligned}$$

$$\begin{aligned}\text{Area of the triangle} &= \frac{\sqrt{3}}{4} \times (\text{side})^2 \\ &= \frac{\sqrt{3}}{4} \times (29.3)^2 \\ &= 372.58\text{m}^2\end{aligned}$$

(ii)

Let x be the breadth of the rectangle.

Now

$$2(l + b) = 88$$

$$16 + x = 44$$

$$x = 28\text{m}$$

Hence area $= 16 \times 28 = 448\text{m}^2$

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Solution 27:

(i)

$$\begin{aligned} \text{Area of } \triangle EBC &= \frac{1}{4} \times 8 \times \sqrt{4 \times 10^2 - 8^2} \\ &= \frac{1}{4} \times 8 \times 18.3 \\ &= 36.6 \text{ cm}^2 \end{aligned}$$

Again

$$\begin{aligned} \text{Area of } \triangle EBC &= \frac{1}{2} \times 8 \times h \\ 36.6 &= 4h \\ h &= 9.15 \end{aligned}$$

$$\begin{aligned} \text{Area of ABCD} &= \frac{1}{2} \times (12 + 20) \times 9.15 \\ &= \frac{1}{2} \times 32 \times 9.15 \\ &= 146.64 \text{ sq. cm} \end{aligned}$$

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

(ii)

$$\begin{aligned}\text{Area of } ABCD &= \frac{1}{2} \times (8 + 14) \times \left(\sqrt{10^2 - 6^2} \right) \\ &= \frac{1}{2} \times 22 \times 8 \\ &= 88 \text{ sq. cm}\end{aligned}$$

(iii)

For the triangle EBC,

$$S = 19 \text{ cm}$$

$$\begin{aligned}\text{Area of } \triangle EBC &= \sqrt{19 \times (19 - 16) \times (19 - 12) \times (19 - 10)} \\ &= \sqrt{19 \times 3 \times 7 \times 9} \\ &= 59.9 \text{ sq. cm}\end{aligned}$$

Let h be the height.

<https://www.indcareer.com/schools/seina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

$$\text{Area of } \triangle EBC = \frac{1}{2} \times 12 \times h$$

$$\Rightarrow 59.9 = 6h$$

$$\Rightarrow h = \frac{59.9}{6} = 9.98 \text{ cm}$$

$$\begin{aligned}\text{Area of } ABCD &= \frac{1}{2} \times (20 + 32) \times 9.98 \\ &= \frac{1}{2} \times 52 \times 9.98 \\ &= 259.48 \text{ cm}^2\end{aligned}$$

In the given figure, we can observe that the non-parallel sides are equal and hence it is an isosceles trapezium.

Therefore, let us draw DE and CF perpendiculars to AB.

Thus, the area of the parallelogram is given by

Since $AB = AE + EF + FB$ and $CD = EF = 18$ cm, we have

$$30 = AE + 18 + FB$$

$$\Rightarrow 30 = AE + 18 + AE$$

$$\Rightarrow 2AE + 18 = 30$$

$$\Rightarrow 2AE = 30 - 18$$

$$\Rightarrow 2AE = 12$$

$$\Rightarrow AE = 6 \text{ cm}$$

Now, consider the right angled triangle ADE.

$$AD^2 = AE^2 + DE^2$$

$$\Rightarrow 12^2 = 6^2 + DE^2$$

$$\Rightarrow 144 = 36 + DE^2$$

$$\Rightarrow DE^2 = 144 - 36$$

$$\Rightarrow DE^2 = 108$$

$$\Rightarrow DE = \sqrt{36 \times 3}$$

$$\Rightarrow DE = 6\sqrt{3}$$

$$\text{Area}(\square ABCD) = \text{Area}(\triangle ADE) + \text{Area}(\square DEFC) + \text{Area}(\triangle CFB)$$

$$\Rightarrow \text{Area}(\square ABCD) = \frac{1}{2} \times 6 \times 6\sqrt{3} + 18 \times 6\sqrt{3} + \frac{1}{2} \times 6 \times 6\sqrt{3}$$

$$\Rightarrow \text{Area}(\square ABCD) = 6 \times 6\sqrt{3} + 18 \times 6\sqrt{3}$$

$$\Rightarrow \text{Area}(\square ABCD) = 144\sqrt{3} = 249.41 \text{ cm}^2$$

Solution 28:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Let b be the breadth of rectangle. then its perimeter

$$2(x + b) = 70$$

$$x + b = 35$$

$$b = 35 - x$$

Again

$$x \times b = 300$$

$$x(35 - x) = 300$$

$$x^2 - 35x + 300 = 0$$

$$(x - 15)(x - 20) = 0$$

$$x = 15, 20$$

Hence its length is 20cm and width is 15cm.

Solution 29:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Let b be the width of the rectangle.

$$x \times b = 640$$

$$b = \frac{640}{x}$$

Again perimeter of the rectangle is 104m.

Hence

$$2 \left(x + \frac{640}{x} \right) = 104$$

$$x^2 - 52x + 640 = 0$$

$$(x - 32)(x - 20) = 0$$

$$x = 32, 20$$

Hence

length=32m

width=20m.

Solution 30:

Let a be the length of the sides of the square.

According to the question

$$2a \times (a + 6) = 3a^2$$

$$2a^2 + 12a = 3a^2$$

$$a = 12$$

Hence sides of the square are 12cm each and

Length of the rectangle = $2a = 24$ cm

Width of the rectangle = $a + 6 = 18$ cm.

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Solution 31:

The figure is shown below:

$$\frac{\text{Area of } \triangle ABP}{\text{Area of trapezium } APCD} = \frac{1}{5}$$

$$\Rightarrow \frac{\frac{1}{2} \times 12 \times (12 - CP)}{\frac{1}{2} \times (12 + CP) \times 12} = \frac{1}{5}$$

$$\Rightarrow 60 - 5CP = 12 + CP$$

$$\Rightarrow 6CP = 48$$

$$\Rightarrow CP = 8 \text{ cm}$$

Solution 32:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Length of the wall = $45 + 2 = 47\text{m}$

Breath of the wall = $30 + 2 = 32\text{m}$

Hence area of the inner surface of the wall is given by

$$\begin{aligned} A &= (47 \times 2 \times 2.4) + (32 \times 2 \times 2.4) \\ &= 225.6 + 153.6 \\ &= 379.2 \text{ m}^2 \end{aligned}$$

Solution 33:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Let a be the length of each side.

$$a^2 = 576$$

$$a = 24 \text{ cm}$$

$$4a = 96 \text{ cm}$$

Hence length of the wire = 96 cm

(i)

For the equilateral triangle,

$$\text{side} = \frac{96}{3} = 32 \text{ cm}$$

$$\begin{aligned}\text{Area} &= \frac{\sqrt{3}}{4} (\text{side})^2 \\ &= \frac{\sqrt{3}}{4} \times 32^2 \\ &= 256\sqrt{3} \text{ sq. cm}\end{aligned}$$

(ii)

Let the adjacent side of the rectangle be x and y cm.

Since the perimeter is 96 cm, we have,

$$2(x + y) = 96$$

Hence

$$x + y = 48$$

$$x - y = 4$$

$$x = 26$$

$$y = 22$$

Hence area of the rectangle is $= 26 \times 22 = 572 \text{ sq. cm}$

<https://www.indcareer.com/schools/seelina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Solution 34:

Let 'y' and 'h' be the area and the height of the first parallelogram respectively.

Let 'height' be the height of the second parallelogram

$$\text{base of the first parallelogram} = \frac{y}{h} \text{ cm}$$

$$\text{base of second parallelogram} = \left(\frac{y}{h} + x \right) \text{ cm}$$

$$\left(\frac{y}{h} + x \right) \times \text{height} = 2y$$

$$\text{height} = \frac{2hy}{y + hx}$$

Solution 35:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

$$EF = \frac{1}{2} \times (AD + BC) = 26 \text{ cm}$$

$$\begin{aligned}\text{Area of the trapezium} &= \frac{1}{2} \times (AD + BC) \times h \\ &= 26 \times 15 \\ &= 390 \text{ cm}^2\end{aligned}$$

Solution 36:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Let a and b be the sides of the rectangle

Since the perimeter is 92 m, we have,

$$2(a + b) = 92$$

$$\Rightarrow a + b = 46 \text{ m} \dots (1)$$

Also given that diagonal of a trapezium is 34 m.

$$\Rightarrow a^2 + b^2 = 34^2 \dots (2)$$

We know that

$$(a + b)^2 - a^2 - b^2 = 2ab$$

From equations (1) and (2), we have,

$$46^2 - 34^2 = 2ab$$

$$\Rightarrow 2ab = 960$$

$$\Rightarrow ab = \frac{960}{2}$$

$$\Rightarrow ab = 480 \text{ m}^2$$

Exercise 20(C)

Solution 1:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Let r be the radius of the circle.

(i)

$$2r = 28\text{cm}$$

$$\begin{aligned}\text{circumference} &= 2\pi r \\ &= 28\pi\text{cm}\end{aligned}$$

(ii)

$$\begin{aligned}\text{area} &= \pi r^2 \\ &= \pi \left(\frac{28}{2}\right)^2 \\ &= 196\pi\text{cm}^2\end{aligned}$$

Solution 2:

Let r be the radius of the circular field

(i)

$$2\pi r = 308$$

$$\Rightarrow r = \frac{308}{2\pi}$$

$$\Rightarrow r = \frac{308}{2} \times \frac{7}{22}$$

$$\Rightarrow r = 49\text{ m}$$

(ii)

$$\begin{aligned}\text{area} &= \pi r^2 \\ &= \frac{22}{7} \times (49)^2 \\ &= 7546\text{ m}^2\end{aligned}$$

Solution 3:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Let r be the radius of the circle.

$$2\pi r + 2r = 116$$

$$2r(\pi + 1) = 116$$

$$\begin{aligned} r &= \frac{116}{2(\pi + 1)} \\ &= 14\text{cm} \end{aligned}$$

Solution 4:

Circumference of the first circle

$$\begin{aligned} S_1 &= 2\pi \times 25 \\ &= 50\pi\text{cm} \end{aligned}$$

Circumference of the second circle

$$\begin{aligned} S_2 &= 2\pi \times 18 \\ &= 36\pi\text{cm} \end{aligned}$$

Let r be the radius of the resulting circle.

$$2\pi r = 50\pi + 36\pi$$

$$2\pi r = 86\pi$$

$$\begin{aligned} r &= \frac{86\pi}{2\pi} \\ &= 43\text{cm} \end{aligned}$$

Solution 5:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Circumference of the first circle

$$\begin{aligned}S_1 &= 2\pi \times 48 \\&= 96\pi \text{ cm}\end{aligned}$$

Circumference of the second circle

$$\begin{aligned}S_2 &= 2\pi \times 13 \\&= 26\pi \text{ cm}\end{aligned}$$

Let r be the radius of the resulting circle.

$$2\pi r = 96\pi - 26\pi$$

$$2\pi r = 70\pi$$

$$\begin{aligned}r &= \frac{70\pi}{2\pi} \\&= 35 \text{ cm}\end{aligned}$$

Hence area of the circle

$$\begin{aligned}A &= \pi r^2 \\&= \pi \times 35^2 \\&= 3850 \text{ cm}^2\end{aligned}$$

Solution 6:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Let the area of the resulting circle be r .

$$\pi \times (16)^2 + \pi \times (12)^2 = \pi \times r^2$$

$$256\pi + 144\pi = \pi \times r^2$$

$$400\pi = \pi \times r^2$$

$$r^2 = 400$$

$$r = 20\text{ cm}$$

Hence the radius of the resulting circle is 20cm.

Solution 7:

Area of the circle having radius 85m is

$$A = \pi \times (85)^2$$

$$= 7225\pi\text{m}^2$$

Let r be the radius of the circle whose area is 49times of the given circle.

$$\pi r^2 = 49 \times (\pi \times 5^2)$$

$$r^2 = (7 \times 5)^2$$

$$r = 35$$

Hence circumference of the circle

$$S = 2\pi r$$

$$= 2\pi \times 35$$

$$= 220\text{m}$$

Solution 8:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Area of the rectangle is given by

$$\begin{aligned}A &= 55 \times 42 \\ &= 2310 \text{cm}^2\end{aligned}$$

For the largest circle, the radius of the circle will be half of the shorter side of the rectangle.

Hence $r=21\text{cm}$.

$$\begin{aligned}\text{Area of the circle} &= \pi \times (21)^2 \\ &= 1384.74 \text{cm}^2\end{aligned}$$

$$\begin{aligned}\text{Area remaining} &= 2310 - 1384.74 \\ &= 925.26\end{aligned}$$

Hence

$$\begin{aligned}\text{the volume of the circle: area remaining} &= 1384.74:925.26 \\ &= 3:2\end{aligned}$$

Solution 9:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Area of the square is given by

$$\begin{aligned}A &= 28^2 \\ &= 784\text{cm}^2\end{aligned}$$

Since there are four identical circles inside the square.

Hence radius of each circle is one fourth of the side of the square.

$$\begin{aligned}\text{Area of one circle} &= \pi \times 7^2 \\ &= 154\text{cm}^2\end{aligned}$$

$$\begin{aligned}\text{Area of four circle} &= 4 \times 154\text{cm}^2 \\ &= 616\text{cm}^2\end{aligned}$$

$$\begin{aligned}\text{Area remaining} &= 784 - 616 \\ &= 168\text{cm}^2\end{aligned}$$

Area remaining in the cardboard is $= 168\text{cm}^2$

Solution 10:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Let the radius of the two circles be $3r$ and $8r$ respectively.

$$\begin{aligned}\text{area of the circle having radius } 3r &= \pi (3r)^2 \\ &= 9\pi r^2\end{aligned}$$

$$\begin{aligned}\text{area of the circle having radius } 8r &= \pi (8r)^2 \\ &= 64\pi r^2\end{aligned}$$

According to the question

$$\begin{aligned}64\pi r^2 - 9\pi r^2 &= 2695\pi \\ 55r^2 &= 2695 \\ r^2 &= 49 \\ r &= 7\text{cm}\end{aligned}$$

Hence radius of the smaller circle is $3 \times 7 = 21\text{cm}$

Area of the smaller circle is given by

$$A = \pi r^2 = \frac{22}{7} \times 21^2 = 1386 \text{ cm}^2$$

Solution 11:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Let the diameter of the three circles be $3d$, $5d$ and $6d$ respectively.

Now

$$\pi \times 3d + \pi \times 5d + \pi \times 6d = 308$$

$$14\pi d = 308$$

$$d = 7$$

$$\text{radius of the smallest circle} = \frac{21}{2} = 10.5$$

$$\begin{aligned}\text{Area} &= \pi \times (10.5)^2 \\ &= 346\end{aligned}$$

$$\text{radius of the largest circle} = \frac{42}{2} = 21$$

$$\begin{aligned}\text{Area} &= \pi \times (21)^2 \\ &= 1385.5\end{aligned}$$

$$\begin{aligned}\text{difference} &= 1385.5 - 346 \\ &= 1039.5\end{aligned}$$

Solution 12:

$$\begin{aligned}\text{Area of the ring} &= \pi (20)^2 - \pi (15)^2 \\ &= 400\pi - 225\pi \\ &= 175\pi \\ &= 549.7\text{cm}^2\end{aligned}$$

Solution 13:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Let r be the radius of the circular park.

$$2\pi r = 55$$

$$\begin{aligned} r &= \frac{55}{2\pi} \\ &= 8.75\text{m} \end{aligned}$$

$$\text{area of the park} = \pi \times (8.75)^2 = 240.625 \text{ m}^2$$

Radius of the outer circular region including the path is given by

$$\begin{aligned} R &= 8.75 + 3.5 \\ &= 12.25 \text{ m} \end{aligned}$$

Area of that circular region is

$$A = \pi \times (12.25)^2 = 471.625 \text{ m}^2$$

Hence area of the path is given by

$$\text{Area of the path} = 471.625 - 240.625 = 231 \text{ m}^2$$

Solution 14:

Let r be the radius of the circular garden A.

Since the circumference of the garden A is $1.760 \text{ Km} = 1760\text{m}$, we have,

$$2\pi r = 1760 \text{ m}$$

$$\Rightarrow r = \frac{1760 \times 7}{2 \times 22} = 280 \text{ m}$$

$$\text{Area of garden A} = \pi r^2 = \frac{22}{7} \times 280^2 \text{ m}^2$$

Let R be the radius of the circular garden B.

Since the area of garden B is 25 times the area of garden A, we have,

$$\pi R^2 = 25 \times \pi r^2$$

$$\Rightarrow \pi R^2 = 25 \times \pi \times 280^2$$

$$\Rightarrow R^2 = 1960000$$

$$\Rightarrow R = 1400 \text{ m}$$

$$\text{Thus circumference of garden B} = 2\pi R = 2 \times \frac{22}{7} \times 1400 = 8800 \text{ m} = 8.8 \text{ Km}$$

Solution 15:

Diameter of the wheel = 84 cm

Thus, radius of the wheel = 42 cm

$$\text{Circumference of the wheel} = 2 \times \frac{22}{7} \times 42 = 264 \text{ cm}$$

In 264 cm , wheel is covering one revolution.

Thus, in $3.168 \text{ Km} = 3.168 \times 100000 \text{ cm}$, number of revolutions

$$\text{covered by the wheel} = \frac{3.168}{264} \times 100000 = 1200$$

Solution 16:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

$$\begin{aligned}\text{the car travells in 10minutes} &= \frac{66}{6} \\ &= 11\text{km} \\ &= 1100000\text{cm}\end{aligned}$$

Circumference of the wheel = distance covered by the wheel in one revolution

Thus, we have,

$$\text{Circumference} = 2 \times \frac{22}{7} \times \frac{80}{2} = 251.43 \text{ cm}$$

Thus, the number of revolutions covered

$$\text{by the wheel in } 1100000 \text{ cm} = \frac{1100000}{251.43} \approx 4375$$

Solution 17:

$$\begin{aligned}\text{radius of the wheel} &= \frac{42}{2} \\ &= 21\text{cm}\end{aligned}$$

$$\begin{aligned}\text{circumference of the wheel} &= 2\pi \times 21 \\ &= 132\text{cm}\end{aligned}$$

$$\begin{aligned}\text{Distance travelled in one minute} &= 132 \times 1200 \\ &= 158400\text{cm} \\ &= 1.584\text{km}\end{aligned}$$

$$\begin{aligned}\text{hence the speed of the train} &= \frac{1.584\text{km}}{\frac{1}{60}\text{hr}} \\ &= 95.04\text{km/hr}\end{aligned}$$

Solution 18:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Time interval is $9.05 - 8.30 = 35$ minutes

Area covered in one 60 minutes = $\pi \times 8^2 = 201 \text{ cm}^2$

Hence area swept in 35 minutes is given by

$$A = \frac{201}{60} \times 35 = 117 \frac{1}{3} \text{ cm}^2$$

Solution 19:

Let R and r be the radius of the big and small circles respectively.

Given that the circumference of the bigger circle is 396 cm

Thus, we have,

$$2\pi R = 396 \text{ cm}$$

$$\Rightarrow R = \frac{396 \times 7}{2 \times 22}$$

$$\Rightarrow R = 63 \text{ cm}$$

Thus, area of the bigger circle = πR^2

$$= \frac{22}{7} \times 63^2$$

$$= 12474 \text{ cm}^2$$

Also given that the circumference of the smaller circle is 374 cm

$$\Rightarrow 2\pi r = 374$$

$$\Rightarrow r = \frac{374 \times 7}{2 \times 22}$$

$$\Rightarrow r = 59.5 \text{ cm}$$

Thus, the area of the smaller circle = πr^2

$$= \frac{22}{7} \times 59.5^2$$

$$= 11126.5 \text{ cm}^2$$

Thus the area of the shaded portion = $12474 - 11126.5 = 1347.5 \text{ cm}^2$

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Solution 20:

From the given data, we can calculate the area of the outer circle and then the area of inner circle and hence the width of the shaded portion.

Given that the circumference of the outer circle is 132 cm

Thus, we have, $2\pi R = 132$ cm

$$\Rightarrow R = \frac{132 \times 7}{2 \times 22}$$

$$\Rightarrow R = 21 \text{ cm}$$

$$\begin{aligned}\text{Area of the bigger circle} &= \pi R^2 \\ &= \frac{22}{7} \times 21^2 \\ &= 1386 \text{ cm}^2\end{aligned}$$

Also given the area of the shaded portion.

$$\begin{aligned}\text{Thus the area of the inner circle} &= \text{Area of the outer circle} - \text{Area of the shaded portion} \\ &= 1386 - 770 \\ &= 616 \text{ cm}^2\end{aligned}$$

$$\Rightarrow \pi r^2 = 616$$

$$\Rightarrow r^2 = \frac{616 \times 7}{22}$$

$$\Rightarrow r^2 = 196$$

$$\Rightarrow r = 14 \text{ cm}$$

Thus, the width of the shaded portion = $21 - 14 = 7$ cm

Solution 21:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Let the radius of the field is r meter.

Therefore circumference of the field will be: $2\pi r$ meter.

Now the cost of fencing the circular field is 52,800 at rate 240 per meter.

Therefore

$$2\pi r \cdot 240 = 52800$$

$$\begin{aligned} r &= \frac{52800 \times 7}{2 \times 240 \times 22} \\ &= 35 \end{aligned}$$

Thus the radius of the field is 35 meter.

Now the area of the field will be:

$$\begin{aligned} \pi r^2 &= \left(\frac{22}{7}\right) \cdot 35^2 \\ &= 3850 \text{ m}^2 \end{aligned}$$

Thus the cost of ploughing the field will be:

$$3850 \times 12.5 = 48,125 \text{ rupees}$$

Solution 22:

Let r and R be the radius of the two circles.

$$r + R = 10 \quad \dots(1)$$

$$\pi r^2 + \pi R^2 = 58\pi \quad \dots(2)$$

Putting the value of r in (2)

$$r^2 + R^2 = 58$$

$$(10 - R)^2 + R^2 = 58$$

$$100 - 20R + R^2 + R^2 = 58$$

$$2R^2 - 20R + 42 = 0$$

$$R^2 - 10R + 21 = 0$$

$$(R - 3)(R - 7) = 0$$

$$R = 3, 7$$

Hence the radius of the two circles is 3cm and 7cm respectively.

Solution 23:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

From the figure:

$$AB = 28 \text{ cm}$$

$$BC = 21 \text{ cm}$$

$$\begin{aligned} AC &= \sqrt{AB^2 + BC^2} \\ &= \sqrt{28^2 + 21^2} \\ &= 35 \text{ cm} \end{aligned}$$

Hence diameter of the circle is 35cm and hence

$$\begin{aligned} \text{Area} &= \pi \times \left(\frac{35}{2}\right)^2 \\ &= 962.5 \text{ cm}^2 \end{aligned}$$

$$\begin{aligned} \text{Area of the rectangle} &= 28 \times 21 \\ &= 588 \text{ cm}^2 \end{aligned}$$

Hence area of the shaded portion is given by

$$A = 962 - 588 = 374.5 \text{ cm}^2$$

Solution 24:

Since the diameter of the circle is the diagonal of the square inscribed in the circle.

Let a be the length of the sides of the square.

Hence

$$\begin{aligned} \sqrt{2}a &= 2 \times 7 \\ a &= \sqrt{2} \times 7 \\ a^2 &= 98 \end{aligned}$$

Hence the area of the square is 98sq.cm.

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Solution 25:

Let a be the length of the sides of the equilateral triangle.

$$\frac{\sqrt{3}}{4}a^2 = 484\sqrt{3}$$

$$a^2 = 1936$$

$$a = 44\text{cm}$$

$$4a = 176\text{cm}$$

Hence the length of the wire is 176cm.

Let r be the radius of the circle.

Hence

$$2\pi r = 176$$

$$r = 28$$

$$\pi r^2 = 2464 \text{ cm}^2$$

Hence the area of the circle is 2464 cm^2

Solution 26:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Given the diameter of the front and rear wheels are
63 cm = 0.63 m and 1.54 m respectively.

$$\text{Radius of the rear wheel} = \frac{1.54}{2} = 0.77 \text{ m}$$

$$\text{and radius of the front wheel} = \frac{0.63}{2} = 0.315 \text{ m}$$

Distance travelled by tractor in one revolution of rear wheel
= circumference of the rear wheel
= $2\pi r$

$$= 2 \times \frac{22}{7} \times 0.77 = 4.84 \text{ m}$$

The rear wheel rotates at $24\frac{6}{11}$ revolutions per minute

$$= \frac{270}{11} \text{ revolutions per minute}$$

Since in one revolution the distance travelled by the rear wheel = 4.84 m

$$\text{So, in } \frac{270}{11} \text{ revolutions, the tractor travels } \frac{270}{11} \times 4.84 = 118.8 \text{ m}$$

Let the number of revolutions made by the front wheel be x .

(i) Now, number of revolutions made by the front wheel in one minute

$\times$ circumference of the wheel

= the distance travelled by the tractor in one minute

$$\Rightarrow x \times 2 \times \frac{22}{7} \times 0.315 = 118.8$$

$$\Rightarrow x = \frac{118.8 \times 7}{2 \times 22 \times 0.315} = 60$$

(ii) Distance travelled by the tractor in 40 minutes

= Number of revolutions made by the rear wheel in 40 minutes

$\times$ circumference of the rear wheel

$$= \frac{270}{11} \times 40 \times 4.84 = 4752 \text{ m}$$

Solution 27:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

Let the radius of the circles be r_1 and r_2 .

$$\text{So, } r_1 + r_2 = 12 \Rightarrow r_2 = 12 - r_1$$

Sum of the areas of the circles = 74π

$$\Rightarrow \pi r_1^2 + \pi r_2^2 = 74\pi$$

$$\Rightarrow r_1^2 + r_2^2 = 74$$

$$\Rightarrow r_1^2 + (12 - r_1)^2 = 74$$

$$\Rightarrow r_1^2 + 144 - 24r_1 + r_1^2 = 74$$

$$\Rightarrow 2r_1^2 - 24r_1 + 70 = 0$$

$$\Rightarrow r_1^2 - 12r_1 + 35 = 0$$

$$\Rightarrow (r_1 - 7)(r_1 - 5) = 0$$

$$\Rightarrow r_1 = 7 \text{ or } r_1 = 5$$

If $r_1 = 7$ cm, then $r_2 = 5$ cm

If $r_1 = 5$ cm, then $r_2 = 7$ cm

So, the diameters of the circles will be 10 cm and 14 cm.

Solution 28:

<https://www.indcareer.com/schools/selina-class-9-icse-solutions-mathematics-chapter-20-area-and-perimeter-of-plane-figures/>

If $AB = x$, $AC = x\sqrt{2}$

Diameter of the circle = diagonal of the square

$$\Rightarrow 2r = x\sqrt{2}$$

$$\Rightarrow r = \frac{x\sqrt{2}}{2}$$

Area of the circle = πr^2

$$= \pi \left(\frac{x\sqrt{2}}{2} \right)^2$$

$$= \pi \left(\frac{x^2 \cdot 2}{4} \right)$$

$$= \frac{\pi x^2}{2}$$

Area of the square = x^2

$$\text{Required ratio} = \frac{\frac{\pi x^2}{2}}{x^2}$$

$$= \frac{\pi}{2}$$

$$= \frac{22}{7} \times \frac{1}{2}$$

$$= \frac{11}{7}$$

Hence, the required ratio is 11 : 7.

About About Selina Publishers ICSE

Selina Publishers has been serving the students since 1976 and is one of the quality ICSE school textbooks publication houses. Mathematics and Science books for classes 6-10 form the core of our business, apart from certain English and Hindi literature as well as a few primary books. All these books are based upon the syllabus published by the Council for the I.C.S.E. Examinations, New Delhi. The textbooks are composed by a panel of subject experts and vetted by teachers practising in ICSE schools all over the country. Continuous efforts are made in complying with the standards and ensuring lucidity and clarity in content, which makes them stand tall in the industry.
