Selina Class 10 ICSE Solutions Chemistry :

Chapter 10- Study of Compounds - Nitric Acid

Class 10: Chemistry Chapter 10 solutions. Complete Class 10 Chemistry Chapter 10 Notes.

Selina Class 10 ICSE Solutions Chemistry : Chapter 10- Study of Compounds - Nitric Acid

Selina 10th Chemistry Chapter 10, Class 10 Chemistry Chapter 10 solutions

Exercise 1

Solution 1.

(a) Aqua fortis: Nitric acid is called aqua fortis. Aqua fortis means strong water. It is so called because it reacts with nearly all metals.

(b) Aqua Regia: Conc. Nitric acid (1part by volume) when mixed with conc. Hydrochloric acid (3 parts by volume) gives a mixture called aqua regia. It means Royal water.

(c) Fixation of Nitrogen: The conversion of free atmospheric nitrogen into useful nitrogenous compounds in the soil is known as fixation of atmospheric nitrogen.

Solution 2.

During lightning discharge, the nitrogen present in the atmosphere reacts with oxygen to form nitric oxide.

<https://www.indcareer.com/schools/selina-class-10-icse-solutions-chemistry-chapter-10-study-of-compounds-nitric-acid/>

Nitric oxide is further oxidized to nitrogen dioxide.

The nitrogen dioxide dissolves in atmospheric moisture in the presence of oxygen of the air and forms nitric acid which is washed down by the rain and combines with the salt present on the surface of the earth.

Solution 3.

(a) Concentrated hydrochloric acid cannot replace Conc. Sulphuric acid for the preparation of nitric acid because hydrochloric acid is volatile acid and hence nitric acid vapours will carry HCl vapours.

(b) Conc. Nitric acid prepared in the laboratory is yellow in colour due to the dissolution of reddish brown coloured nitrogen dioxide gas in acid. This gas is produced due to the thermal dissociation of a portion of nitric acid.

The yellow colour of the acid is removed:

If dry air or CO_2 is bubbled through the yellow acid, the acid turns colourless because it drives out NO_2 from warm acid which is further oxidized to nitric acid.

By addition of excess of water, nitrogen dioxide gas dissolves in water and thus the yellow colour of the acid is removed.

(c) The temperature of the mixture of concentrated sulphuric acid and sodium nitrate should not exceed 200°C because sodium sulphate formed at higher temperature forms a hard crust which sticks to the walls of the retort and is difficult to remove. At higher temperature nitric acid may also decompose.

Solution 4.

Nitric acid forms a constant boiling mixture with water containing 68% acid. This mixture boils constantly at constant boiling point without any change in its composition. At this temperature,

<https://www.indcareer.com/schools/selina-class-10-icse-solutions-chemistry-chapter-10-study-of-compounds-nitric-acid/>

the gas and the water vapour escape together. Hence the composition of the solution remains unchanged. So nitric acid cannot be concentrated beyond 68% by distillation of dilute solution of HNO_3 .

Solution 5.

Iron becomes inert when reacted with nitric acid due to the formation of extremely thin layer of insoluble metallic oxide which stops the reaction.

Passivity can be removed by rubbing the surface layer with the sand paper or by treating with strong reducing agent.

Solution 6.

(a) When carbon and conc. Nitric acid is heated the products formed are Carbon dioxide, Nitrogen dioxide and water.

(b) Copper when reacts with dilute HNO_3 forms Copper nitrate, Nitric oxide and water.

Solution 7.

(a) Reaction of nitric acid with non-metals:

(b) Nitric acid showing acidic character:

(c) Nitric acid acting as oxidizing agent

<https://www.indcareer.com/schools/selina-class-10-icse-solutions-chemistry-chapter-10-study-of-compounds-nitric-acid/>

Solution 8.

(a) When Sodium hydrogen carbonate is added to nitric acid sodium nitrate, carbon dioxide and water is formed.

(b) When Cupric oxide reacts with dilute nitric acid, it forms Copper nitrate.

(c) Zinc reacts with nitric acid to form Zinc nitrate, nitric oxide and water.

**Solution 10.**

(a) Sodium nitrate:

Sodium hydroxide reacts with nitric acid to form sodium nitrate.

(b) Copper nitrate:

Copper oxide reacts with nitric acid to form copper nitrate.

(c) Lead nitrate:

Lead reacts with conc. nitric acid to form lead nitrate.

(d) Magnesium nitrate:

Magnesium with dil. nitric acid to form magnesium nitrate.

<https://www.indcareer.com/schools/selina-class-10-icse-solutions-chemistry-chapter-10-study-of-compounds-nitric-acid/>

(e) Ferric nitrate:

Iron reacts with conc. nitric acid to form ferric nitrate.

(f) Aqua regia:

Nitric acid reacts with hydrochloric acid to form a mixture called aqua regia.

Solution 11.

(a) HNO_3 is strong oxidizing agent.

(b) NaNO_3 gives NaNO_2 and oxygen on heating.

(c) Constant boiling nitric acid contains 68% nitric acid by weight.

(d) Nitric acid turns yellow solution when exposed to light.

Solution 12.

The chemical name of the brown ring is Nitroso ferrous sulphate.

Formula: $\text{FeSO}_4 \cdot \text{NO}$

Solution 13.

Three important uses of Nitric acid and the property of nitric acid involved is:

S.NO.	Use	Property
1.	To etch designs on copper and brassware.	Nitric acid act as solvent for large number of metals.
2.	To purify gold.	Impurities like Cu, Ag, Zn, etc. dissolve in nitric acid.
3.	Preparation of aqua regia.	Dissolves noble metals.

<https://www.indcareer.com/schools/selina-class-10-icse-solutions-chemistry-chapter-10-study-of-compounds-nitric-acid/>

Solution 14.

(a) KNO_3

(b) FeSO_4

(c) NO_2

Solution 15.

(a) Brown ring test

Procedure:

1. Add freshly prepared saturated solution of iron (II)sulphate to the aq. solution of nitric acid.
2. Now add conc. Sulphuric acid carefully from the sides of the test tube, so that it should not fall drop wise in the test tube.
3. Cool the test tube in water.
4. (iv) A brown ring appears at the junction of the two liquids.
5. (b) A freshly prepared ferrous sulphate solution is used because on exposure to the atmosphere, it is oxidized to ferric sulphate which will not give the brown ring.

Solution 16.

(a) Potassium nitrate

(b) Ammonium nitrate

(c) Lead nitrate

Solution 17.

(a) Aqua regia is a mixture of 3 parts Hydrochloric acid and one part Nitric acid.

(b) The catalytic oxidation of ammonia to nitric oxide is exothermic.

(c) Magnesium gives H_2 with very dilute nitric acid.

(d) Iron become passive in concentrated nitric acid

Solution 1 (2005).

<https://www.indcareer.com/schools/selina-class-10-icse-solutions-chemistry-chapter-10-study-of-compounds-nitric-acid/>

(a) Dilute acid is generally considered a typical acid except for its reaction with metals since it does not liberate hydrogen. It is a powerful oxidizing agent and the nascent oxygen formed oxidizes the hydrogen to water.

Solution 1 (2006).

(a) All glass apparatus are used because nitric acid vapours are highly corrosive in nature and corrodes cork and rubber etc.

(b) Nitric acid is kept in reagent bottle because nitric acid is a highly fuming liquid; it spreads in air and is highly corrosive.

Solution 1 (2006).

When ammonium nitrate is heated the products formed are nitrous oxide and steam.

Selina Publishers ICSE Solutions

Class 10 Chemistry

- Chapter 1- Periodic Table, Periodic Properties and Variations of Properties
- Chapter 2- Chemical Bonding
- Chapter 3- Acids, Bases and Salts
- Chapter 4- Analytical Chemistry: Uses of Ammonium Hydroxide And Sodium Hydroxide
- Chapter 5- Mole Concept and Stoichiometry
- Chapter 6- Electrolysis
- Chapter 7- Metallurgy
- Chapter 8- Study of Compounds - Hydrogen Chloride
- Chapter 9- Study of Compounds - Study of Compounds - Ammonia
- Chapter 10- Study of Compounds - Nitric Acid
- Chapter 11- Sulphuric Acid
- Chapter 12- Organic Chemistry
- Chapter 13- Practical Work

About About Selina Publishers ICSE

Selina Publishers has been serving the students since 1976 and is one of the quality ICSE school textbooks publication houses. Mathematics and Science books for classes 6-10 form the core of our business, apart from certain English and Hindi literature as well as a few primary books. All these books are based upon the syllabus published by the Council for the I.C.S.E. Examinations, New Delhi. The textbooks are composed by a panel of subject experts and vetted by teachers practising in ICSE schools all over the country. Continuous efforts are made in complying with the standards and ensuring lucidity and clarity in content, which makes them stand tall in the industry.

About IndCareer

IndCareer.com is a leading developer of online career guidance resources for the Indian marketplace. Established in 2007, IndCareer.com is currently used by over thousands of institutions across India, including schools, employment agencies, libraries, colleges and universities.

IndCareer.com is designed to assist you in making the right career decision - a decision that meets your unique interests and personality.
