RD Sharma Solutions for Class 9 Maths Chapter 15–Area of Parallelograms and Triangles

RD Sharma 9th Maths Chapter 15, Class 9 Maths Chapter 15 solutions

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-9-maths-chapter-15-area-of-parallelograms-and-triangles/>

Exercise 15.1 Page No: 15.3

Question 1: Which of the following figures lie on the same base and between the same parallel. In such a case, write the common base and two parallels:

Solution:

(i) Triangle APB and trapezium ABCD are on the common base AB and between the same parallels AB and DC.

So,

Common base = AB

Parallel lines: AB and DC

(ii) Parallelograms ABCD and APQD are on the same base AD and between the same parallels AD and BQ.

Common base = AD

Parallel lines: AD and BQ

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-9-maths-chapter-15-area-of-parallelograms-and-triangles/>

(iii) Consider, parallelogram ABCD and ΔPQR , lies between the same parallels AD and BC. But not sharing common base.

(iv) ΔQRT and parallelogram PQRS are on the same base QR and lies between same parallels QR and PS.

Common base = QR

Parallel lines: QR and PS

(v) Parallelograms PQRS and trapezium SMNR share common base SR, but not between the same parallels.

(vi) Parallelograms: PQRS, AQRD, BCQR are between the same parallels. Also,

Parallelograms: PQRS, BPSC, APSD are between the same parallels.

Exercise 15.2 Page No: 15.14

Question 1: If figure, ABCD is a parallelogram, $AE \perp DC$ and $CF \perp AD$. If $AB = 16$ cm, $AE = 8$ cm and $CF = 10$ cm, find AD.

Solution:

In parallelogram ABCD, $AB = 16$ cm, $AE = 8$ cm and $CF = 10$ cm

Since, opposite sides of a parallelogram are equal, then

$$AB = CD = 16 \text{ cm}$$

We know, Area of parallelogram = Base x Corresponding height

Area of parallelogram ABCD:

$$CD \times AE = AD \times CF$$

$$16 \times 8 = AD \times 10$$

$$AD = 12.8$$

Measure of AD = 12.8 cm

Question 2: In Q.No. 1, if $AD = 6$ cm, $CF = 10$ cm and $AE = 8$ cm, find AB.

Solution: Area of a parallelogram ABCD:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-9-maths-chapter-15-area-of-parallelograms-and-triangles/>

From figure:

$$AD \times CF = CD \times AE$$

$$6 \times 10 = CD \times 8$$

$$CD = 7.5$$

Since, opposite sides of a parallelogram are equal.

$$\Rightarrow AB = DC = 7.5 \text{ cm}$$

Question 3: Let ABCD be a parallelogram of area 124 cm^2 . If E and F are the mid-points of sides AB and CD respectively, then find the area of parallelogram AEFD.

Solution:

ABCD be a parallelogram.

$$\text{Area of parallelogram} = 124 \text{ cm}^2 \text{ (Given)}$$

Consider a point P and join AP which is perpendicular to DC.

Now, Area of parallelogram EBCF = FC x AP and

$$\text{Area of parallelogram AFED} = DF \times AP$$

Since F is the mid-point of DC, so $DF = FC$

From above results, we have

$$\text{Area of parallelogram AEFD} = \text{Area of parallelogram EBCF} = \frac{1}{2} (\text{Area of parallelogram ABCD})$$

$$= \frac{124}{2}$$

$$= 62$$

Area of parallelogram AEFD is 62 cm^2 .

Question 4: If ABCD is a parallelogram, then prove that

$$\text{ar}(\Delta ABD) = \text{ar}(\Delta BCD) = \text{ar}(\Delta ABC) = \text{ar}(\Delta ACD) = \frac{1}{2} \text{ar}(\text{||}^{\text{gm}} \text{ABCD})$$

Solution:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-9-maths-chapter-15-area-of-parallelograms-and-triangles/>

ABCD is a parallelogram.

When we join the diagonal of parallelogram, it divides it into two quadrilaterals.

Step 1: Let AC is the diagonal, then, $\text{Area}(\triangle ABC) = \text{Area}(\triangle ACD) = \frac{1}{2}(\text{Area of } \parallel^{\text{gm}} \text{ ABCD})$

Step 2: Let BD be another diagonal

$\text{Area}(\triangle ABD) = \text{Area}(\triangle BCD) = \frac{1}{2}(\text{Area of } \parallel^{\text{gm}} \text{ ABCD})$

Now,

From Step 1 and step 2, we have

$\text{Area}(\triangle ABC) = \text{Area}(\triangle ACD) = \text{Area}(\triangle ABD) = \text{Area}(\triangle BCD) = \frac{1}{2}(\text{Area of } \parallel^{\text{gm}} \text{ ABCD})$

Hence Proved.

Exercise 15.3 Page No: 15.40

Question 1: In figure, compute the area of quadrilateral ABCD.

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-9-maths-chapter-15-area-of-parallelograms-and-triangles/>

Solution:

A quadrilateral ABCD with DC = 17 cm, AD = 9 cm and BC = 8 cm (Given)

In right $\triangle ABD$,

Using Pythagorean Theorem,

$$AB^2 + AD^2 = BD^2$$

$$15^2 = AB^2 + 9^2$$

$$AB^2 = 225 - 81 = 144$$

$$AB = 12$$

$$\text{Area of } \triangle ABD = \frac{1}{2}(12 \times 9) \text{ cm}^2 = 54 \text{ cm}^2$$

In right $\triangle BCD$:

Using Pythagorean Theorem,

$$CD^2 = BD^2 + BC^2$$

$$17^2 = BD^2 + 8^2$$

$$BD^2 = 289 - 64 = 225$$

$$\text{or } BD = 15$$

$$\text{Area of } \triangle BCD = \frac{1}{2}(8 \times 15) \text{ cm}^2 = 60 \text{ cm}^2$$

Now, area of quadrilateral ABCD = Area of $\triangle ABD$ + Area of $\triangle BCD$

$$= 54 \text{ cm}^2 + 60 \text{ cm}^2$$

$$= 114 \text{ cm}^2$$

Question 2: In figure, PQRS is a square and T and U are, respectively, the mid-points of PS and QR. Find the area of $\triangle OTS$ if PQ = 8 cm.

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-9-maths-chapter-15-area-of-parallelograms-and-triangles/>

**Solution:**

T and U are mid points of PS and QR respectively (Given)

Therefore, $TU \parallel PQ \Rightarrow TO \parallel PQ$

In ΔPQS ,

T is the mid-point of PS and $TO \parallel PQ$

So, $TO = \frac{1}{2} PQ = 4 \text{ cm}$

(PQ = 8 cm given)

Also, $TS = \frac{1}{2} PS = 4 \text{ cm}$ [PQ = PS, As PQRS is a square]

Now,

Area of $\Delta OTS = \frac{1}{2}(TO \times TS)$

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-9-maths-chapter-15-area-of-parallelograms-and-triangles/>

$$= \frac{1}{2}(4 \times 4) \text{ cm}^2$$

$$= 8 \text{ cm}^2$$

Area of $\triangle OTS$ is 8 cm^2 .

Question 3: Compute the area of trapezium PQRS in figure.

Solution:

From figure,

Area of trapezium PQRS = Area of rectangle PSRT + Area of $\triangle QRT$

$$= PT \times RT + \frac{1}{2} (QT \times RT)$$

$$= 8 \times RT + \frac{1}{2}(8 \times RT)$$

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-9-maths-chapter-15-area-of-parallelograms-and-triangles/>

$$= 12 RT$$

In right ΔQRT ,

Using Pythagorean Theorem,

$$QR^2 = QT^2 + RT^2$$

$$RT^2 = QR^2 - QT^2$$

$$RT^2 = 17^2 - 8^2 = 225$$

$$\text{or } RT = 15$$

Therefore, Area of trapezium = $12 \times 15 \text{ cm}^2 = 180 \text{ cm}^2$

Question 4: In figure, $\angle AOB = 90^\circ$, $AC = BC$, $OA = 12 \text{ cm}$ and $OC = 6.5 \text{ cm}$. Find the area of ΔAOB .

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-9-maths-chapter-15-area-of-parallelograms-and-triangles/>

Solution:

Given: A triangle AOB, with $\angle AOB = 90^\circ$, $AC = BC$, $OA = 12$ cm and $OC = 6.5$ cm

As we know, the midpoint of the hypotenuse of a right triangle is equidistant from the vertices.

So, $CB = CA = OC = 6.5$ cm

$AB = 2 CB = 2 \times 6.5$ cm = 13 cm

In right $\triangle OAB$:

Using Pythagorean Theorem, we get

$$AB^2 = OB^2 + OA^2$$

$$13^2 = OB^2 + 12^2$$

$$OB^2 = 169 - 144 = 25$$

or $OB = 5$ cm

Now, Area of $\triangle AOB = \frac{1}{2}(\text{Base} \times \text{height}) \text{ cm}^2 = \frac{1}{2}(12 \times 5) \text{ cm}^2 = 30 \text{ cm}^2$

Question 5: In figure, ABCD is a trapezium in which $AB = 7$ cm, $AD = BC = 5$ cm, $DC = x$ cm, and distance between AB and DC is 4 cm. Find the value of x and area of trapezium ABCD.

Solution:

Given: ABCD is a trapezium, where $AB = 7$ cm, $AD = BC = 5$ cm, $DC = x$ cm, and

Distance between AB and DC = 4 cm

Consider AL and BM are perpendiculars on DC, then

$AL = BM = 4$ cm and $LM = 7$ cm.

In right $\triangle BMC$:

Using Pythagorean Theorem, we get

$$BC^2 = BM^2 + MC^2$$

$$25 = 16 + MC^2$$

$$MC^2 = 25 - 16 = 9$$

$$\text{or } MC = 3$$

Again,

In right $\triangle ADL$:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-9-maths-chapter-15-area-of-parallelograms-and-triangles/>

Using Pythagorean Theorem, we get

$$AD^2 = AL^2 + DL^2$$

$$25 = 16 + DL^2$$

$$DL^2 = 25 - 16 = 9$$

$$\text{or } DL = 3$$

$$\text{Therefore, } x = DC = DL + LM + MC = 3 + 7 + 3 = 13$$

$$\Rightarrow x = 13 \text{ cm}$$

Now,

$$\text{Area of trapezium ABCD} = \frac{1}{2}(AB + CD) AL$$

$$= \frac{1}{2}(7+13)4$$

$$= 40$$

Area of trapezium ABCD is 40 cm².

Question 6: In figure, OCDE is a rectangle inscribed in a quadrant of a circle of radius 10 cm. If $OE = 2\sqrt{5}$ cm, find the area of the rectangle.

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-9-maths-chapter-15-area-of-parallelograms-and-triangles/>

Solution:

From given:

Radius = $OD = 10$ cm and $OE = 2\sqrt{5}$ cm

In right $\triangle DEO$,

By Pythagoras theorem

$$OD^2 = OE^2 + DE^2$$

$$(10)^2 = (2\sqrt{5})^2 + DE^2$$

$$100 - 20 = DE^2$$

$$DE = 4\sqrt{5}$$

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-9-maths-chapter-15-area-of-parallelograms-and-triangles/>

Now,

$$\text{Area of rectangle OCDE} = \text{Length} \times \text{Breadth} = \text{OE} \times \text{DE} = 2\sqrt{5} \times 4\sqrt{5} = 40$$

Area of rectangle is 40 cm^2 .

Question 7: In figure, ABCD is a trapezium in which $AB \parallel DC$. Prove that $\text{ar}(\triangle AOD) = \text{ar}(\triangle BOC)$

Solution:

ABCD is a trapezium in which $AB \parallel DC$ (Given)

To Prove: $\text{ar}(\triangle AOD) = \text{ar}(\triangle BOC)$

Proof:

From figure, we can observe that $\triangle ADC$ and $\triangle BDC$ are sharing common base i.e. DC and between same parallels AB and DC.

Then, $\text{ar}(\triangle ADC) = \text{ar}(\triangle BDC) \dots\dots(1)$

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-9-maths-chapter-15-area-of-parallelograms-and-triangles/>

$\triangle ADC$ is the combination of triangles, $\triangle AOD$ and $\triangle DOC$. Similarly, $\triangle BDC$ is the combination of $\triangle BOC$ and $\triangle DOC$ triangles.

Equation (1) \Rightarrow $\text{ar}(\triangle AOD) + \text{ar}(\triangle DOC) = \text{ar}(\triangle BOC) + \text{ar}(\triangle DOC)$

or $\text{ar}(\triangle AOD) = \text{ar}(\triangle BOC)$

Hence Proved.

Question 8: In figure, $ABCD$, $ABFE$ and $CDEF$ are parallelograms. Prove that $\text{ar}(\triangle ADE) = \text{ar}(\triangle BCF)$.

Solution:

Here, $ABCD$, $CDEF$ and $ABFE$ are parallelograms:

Which implies:

$AD = BC$

$DE = CF$ and

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-9-maths-chapter-15-area-of-parallelograms-and-triangles/>

$$AE = BF$$

Again, from triangles ADE and BCF:

$$AD = BC, DE = CF \text{ and } AE = BF$$

By SSS criterion of congruence, we have

$$\triangle ADE \cong \triangle BCF$$

Since both the triangles are congruent, then $\text{ar}(\triangle ADE) = \text{ar}(\triangle BCF)$.

Hence Proved,

Question 9: Diagonals AC and BD of a quadrilateral ABCD intersect each other at P. Show that: $\text{ar}(\triangle APB) \times \text{ar}(\triangle CPD) = \text{ar}(\triangle APD) \times \text{ar}(\triangle BPC)$.

Solution:

Consider: BQ and DR are two perpendiculars on AC.

To prove: $\text{ar}(\triangle APB) \times \text{ar}(\triangle CPD) = \text{ar}(\triangle APD) \times \text{ar}(\triangle BPC)$.

Now,

$$\text{L.H.S.} = \text{ar}(\triangle APB) \times \text{ar}(\triangle CDP)$$

$$= \left(\frac{1}{2} \times AP \times BQ\right) \times \left(\frac{1}{2} \times PC \times DR\right)$$

$$= \left(\frac{1}{2} \times PC \times BQ\right) \times \left(\frac{1}{2} \times AP \times DR\right)$$

$$= \text{ar}(\triangle APD) \times \text{ar}(\triangle BPC)$$

$$= \text{R.H.S.}$$

Hence proved.

Question 10: In figure, ABC and ABD are two triangles on the base AB. If line segment CD is bisected by AB at O, show that $\text{ar}(\triangle ABC) = \text{ar}(\triangle ABD)$.

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-9-maths-chapter-15-area-of-parallelograms-and-triangles/>

Solution:

Draw two perpendiculars CP and DQ on AB.

Now,

$$\text{ar}(\triangle ABC) = \frac{1}{2} \times AB \times CP \dots\dots\dots (1)$$

$$\text{ar}(\triangle ABD) = \frac{1}{2} \times AB \times DQ \dots\dots\dots (2)$$

To prove the result, $\text{ar}(\triangle ABC) = \text{ar}(\triangle ABD)$, we have to show that $CP = DQ$.

In right angled triangles, $\triangle CPO$ and $\triangle DQO$

$$\angle CPO = \angle DQO = 90^\circ$$

$$CO = OD \text{ (Given)}$$

$$\angle COP = \angle DOQ \text{ (Vertically opposite angles)}$$

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-9-maths-chapter-15-area-of-parallelograms-and-triangles/>

By AAS condition: $\triangle CPQ \cong \triangle DQO$

So, $CP = DQ$ (3)

(By CPCT)

From equations (1), (2) and (3), we have

$$\text{ar}(\triangle ABC) = \text{ar}(\triangle ABD)$$

Hence proved.

Exercise VSAQs Page No: 15.55

Question 1: If ABC and BDE are two equilateral triangles such that D is the mid-point of BC, then find $\text{ar}(\triangle ABC) : \text{ar}(\triangle BDE)$.

Solution:

Given: ABC and BDE are two equilateral triangles.

We know, area of an equilateral triangle = $\frac{\sqrt{3}}{4} (\text{side})^2$

Let "a" be the side measure of given triangle.

Find $\text{ar}(\triangle ABC)$:

$$\text{ar}(\triangle ABC) = \frac{\sqrt{3}}{4} (a)^2$$

Find $\text{ar}(\triangle BDE)$:

$$\text{ar}(\triangle BDE) = \frac{\sqrt{3}}{4} (a/2)^2$$

(D is the mid-point of BC)

Now,

$$\text{ar}(\triangle ABC) : \text{ar}(\triangle BDE)$$

$$\text{or } \frac{\sqrt{3}}{4} (a)^2 : \frac{\sqrt{3}}{4} (a/2)^2$$

or 1 : 1/4

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-9-maths-chapter-15-area-of-parallelograms-and-triangles/>

or 4:1

This implies, $\text{ar}(\triangle ABC) : \text{ar}(\triangle BDE) = 4:1$

Question 2: In figure, ABCD is a rectangle in which CD = 6 cm, AD = 8 cm. Find the area of parallelogram CDEF.

Solution:

ABCD is a rectangle, where CD = 6 cm and AD = 8 cm (Given)

From figure: Parallelogram CDEF and rectangle ABCD on the same base and between the same parallels, which means both have equal areas.

Area of parallelogram CDEF = Area of rectangle ABCD(1)

Area of rectangle ABCD = CD x AD = 6 x 8 cm² = 48 cm²

Equation (1) => Area of parallelogram CDEF = 48 cm².

Question 3: In figure, find the area of $\triangle GEF$.

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-9-maths-chapter-15-area-of-parallelograms-and-triangles/>

Solution:

From figure:

Parallelogram CDEF and rectangle ABCD on the same base and between the same parallels, which means both have equal areas.

$$\text{Area of CDEF} = \text{Area of ABCD} = 8 \times 6 \text{ cm}^2 = 48 \text{ cm}^2$$

Again,

Parallelogram CDEF and triangle EFG are on the same base and between the same parallels, then

$$\text{Area of a triangle} = \frac{1}{2}(\text{Area of parallelogram})$$

In this case,

$$\text{Area of a triangle EFG} = \frac{1}{2}(\text{Area of parallelogram CDEF}) = \frac{1}{2}(48 \text{ cm}^2) = 24 \text{ cm}^2.$$

Question 4: In figure, ABCD is a rectangle with sides AB = 10 cm and AD = 5 cm. Find the area of ΔEFG .

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-9-maths-chapter-15-area-of-parallelograms-and-triangles/>

Solution:

From figure:

Parallelogram ABEF and rectangle ABCD on the same base and between the same parallels, which means both have equal areas.

$$\text{Area of ABEF} = \text{Area of ABCD} = 10 \times 5 \text{ cm}^2 = 50 \text{ cm}^2$$

Again,

Parallelogram ABEF and triangle EFG are on the same base and between the same parallels, then

$$\text{Area of a triangle} = \frac{1}{2}(\text{Area of parallelogram})$$

In this case,

$$\text{Area of a triangle EFG} = \frac{1}{2}(\text{Area of parallelogram ABEF}) = \frac{1}{2}(50 \text{ cm}^2) = 25 \text{ cm}^2.$$

Question 5: PQRS is a rectangle inscribed in a quadrant of a circle of radius 13 cm. A is any point on PQ. If PS = 5 cm, then find $\text{ar}(\triangle \text{RAS})$.

Solution:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-9-maths-chapter-15-area-of-parallelograms-and-triangles/>

PQRS is a rectangle with PS = 5 cm and PR = 13 cm (Given)

In $\triangle PSR$:

Using Pythagoras theorem,

$$SR^2 = PR^2 - PS^2 = (13)^2 - (5)^2 = 169 - 25 = 144$$

or SR = 12

Now,

$$\text{Area of } \triangle RAS = \frac{1}{2} \times SR \times PS$$

$$= \frac{1}{2} \times 12 \times 5$$

$$= 30$$

Therefore, Area of $\triangle RAS$ is 30 cm².

About RD Sharma

RD Sharma isn't the kind of author you'd bump into at lit fests. But his bestselling books have helped many CBSE students lose their dread of maths. Sunday Times profiles the tutor turned internet star

He dreams of algorithms that would give most people nightmares. And, spends every waking hour thinking of ways to explain concepts like 'series solution of linear differential equations'. Meet Dr Ravi Dutt Sharma — mathematics teacher and author of 25 reference books — whose name evokes as much awe as the subject he teaches. And though students have used his thick tomes for the last 31 years to ace the dreaded maths exam, it's only recently that a spoof video turned the tutor into a YouTube star.

R D Sharma had a good laugh but said he shared little with his on-screen persona except for the love for maths. "I like to spend all my time thinking and writing about maths problems. I find it relaxing," he says. When he is not writing books explaining mathematical concepts for classes 6 to 12 and engineering students, Sharma is busy dispensing his duty as vice-principal and head of department of science and humanities at Delhi government's Guru Nanak Dev Institute of Technology.

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-9-maths-chapter-15-area-of-parallelograms-and-triangles/>
